

Post Lab: Comprehensive Questions

1. What structure is actually growing?
2. What structure is the result of the epidermal cells covering the area of damage?
3. What cellular aggregation is responsible for the growing fins?
4. After seeing images of growth before and after do you see coloration being conserved?
5. What do you think would happen if part of the fin was cut beyond the fin region into the actual tail section?
6. What other experiments or changes to this experiment would you like to try in the future?
